

CofC Elections Scheduled

Steps for electing four members to the board of directors of the Chamber of Commerce are now being taken, Tom Watson, Chamber manager revealed this week.

While the term of five members will expire, four new members will be elected by the general membership, the fifth member to be appointed by the board itself.

Those whose terms will expire are the following: Donald

Armstrong, John A. Ebbinghouse, Darwin D. Parrish, and Dean L. Sears.

Ballots will be sent out by November 8 and must be returned by November 18. A Chamber member, including those whose terms are expiring, will be eligible on the first ballot.

When this ballot has been returned, a committee will select the eight candidates with the largest number of votes and

'56 Oldsmobile Provides Transmission Smoothness

Oldsmobile's revolutionary new Jetaway Hydra-Matic Drive transmission, to be introduced on the 1956 Super "88" and "98" models November 3, is a new concept in automatic gear shifting that incorporates a second fluid coupling to transmit the smooth flow of power to the drive shaft. Details on the new Jetaway were announced today by J. F. Wolfram, general manager of Oldsmobile and vice president of General Motors.

The new models will go on display November 3 at Cecil L. Thomas and sons, Pacific blvd. and 4th street in San Pedro.

"The upshifts from first to second, second to third and third to high are smoother than ever before achieved in an automatic transmission," Wolfram asserted. "Similarly, the downshifts are barely perceptible. Jetaway has all the economy and dependability of the Hydra-Matic Drive, pioneered by Oldsmobile in 1939, plus new velvet smooth performance."

A new small fluid coupling and two sprag clutches replace the familiar front friction clutch and bands in the Hydra-Matic Drive unit. Power from the increased output "Rocket" engine is transmitted to the transmission through a set of planetary gears located in the first coupling. In first and third gear the front unit is in reduction and the new small fluid coupling is empty. Filling the front fluid coupling gives a smooth transition, putting the front unit in direct drive for second and fourth gear.
